Lesson 5: Looking at Code Review Results and Resubmitting

Overview

This document outlines the important steps needed for looking at code review results and resubmitting the code review after defects have been fixed. It is intended to be a companion to the **Atlassian Tools: Looking at Code Review Results and Resubmitting** video hosting in the course LMS.

Objectives

- 1 Translate code review results
- 2 Resubmit a code review after defects have been fixed

Looking at Code Review Results

After your instructor has completed your code review, you must look at the feedback so that you can correct any defects that may be in your code.

Keep the following in mind as you work along with the video:

- 1 You will be notified via email when your instructor has completed your code review.
- 2 The total number of comments will be displayed at the top of the left-hand pane of the code review screen.
- 3 The number of comments in a particular file will show up beside the file name in the left-hand pane of the code review screen.
- 4 The overall grade for your code review will appear in the General Comments (your instructor will also put your grade in the LMS).
- 5 You should start with the General Comments to see your overall results and read any general notes from your instructor. After that, go through all of the comments in each individual file in the review.
- 6 When you find a comment that contains an item you wish to fix, you must create a Jira Issue for the fix. To do this, follow these steps:
 - a Click on **Create Issue** in the comment
 - b Select **Bug** for the Jira Issue Type in the **Create issue** dialog box
 - c Add any additional wording in the Description
 - d Click **Create**

Fixing Defects and Resubmitting the Review

After you have looked at the results of the code review and have created Jira Issues, you will complete these work items using the process outlined in the **Atlassian Tools: Creating and Implementing Assignments** video. When you have checked in all the new code and resolved the associated issues in Jira, you will reopen the code review and add the new changesets as outlined in the video.

Keep the following in mind as you work along with the video:

- 1 You must **Reopen** the code review before you can add new content to the review.
- 2 After you Reopen the code review, you will add content using the + button in the left-hand pane.
- 3 Click on **Browse changesets** and then select the appropriate changesets for this review. Click **Done** when finished.
